

FERDY FEBRIAN ISKANDAR

Data Analyst | SQL, Python, Excel | Supply Chain and Operations Data

Jakarta, Indonesia | [linkedin.com/in/ferdyfebrianiskandar](https://www.linkedin.com/in/ferdyfebrianiskandar)

Portfolio: ferdy-portfolio.pages.dev | GitHub: github.com/Ferdyfi24

PROFESSIONAL SUMMARY

Data analyst with an operations background: I work where the warehouse, the stores and the numbers meet, and turn messy operational records into decisions people act on. I designed the data model and reporting behind a working warehouse management system at One Logistics Solutions, built a churn model that flags **85%+** of at-risk B2B customers on 36,000+ real transactions, and scored **100/100** in DQLab's SQL (rank 62 of 194) and Excel hackathons. Management graduate, GPA 3.79, best graduate of class.

SKILLS

Data analysis: SQL (MySQL, PostgreSQL), Python (pandas, scikit-learn, mlxtend, Prophet, SHAP), Microsoft Excel (Pivot Table, VLOOKUP, SUMIF), Google Sheets, Google Apps Script

Methods: Data Cleaning, Data Modeling, Data Validation and Reconciliation, Exploratory Data Analysis (EDA), Anomaly Detection, Time Series Forecasting, Classification (Random Forest), Market Basket Analysis (Apriori), Customer Segmentation (RFM), Churn Prediction

Reporting and domain: Data Visualization, Dashboards (Streamlit), KPI Reporting, Business Insights and Recommendations, Inventory and Supply Chain Data, Retail Sales Data

WORK EXPERIENCE

Business Operations

Aug 2026 - Present

One Logistics Solutions (Mofmofriends), South Jakarta

- Designed the data model behind the company's **warehouse management system (WMS)** on Google Sheets and Apps Script: stock is never stored, it is derived from an append-only movement ledger covering **8 stores, 3 retail partners and 43 SKUs**
- Defined the first shelf-availability metric and its root-cause analysis: **16% of stock on store shelves**, 83% in the warehouse, 26 SKUs never allocated; shelf share reached **27.7% by October 2026**
- Built the reporting layer on the ledger: stock by location and date, sell-out per partner and store, monthly consignment COGS (HPP) for finance, and data-quality flags on the dashboard
- Reconciled stock counts against the ledger (the first count showed three different totals for one warehouse) and partner sales reports against delivery records
- Cover every business rule with automated tests, each proven to fail when the rule is removed (mutation testing); AI writes most of the code, I own the rules and the checks

Distribution and Operations Staff

Dec 2024 - Jul 2026

Pertamina-authorized LPG 3 kg sub-agent distributor, Tanah Datar, West Sumatra

- Administered billing, invoicing and receivables for **250+ B2B/B2C accounts** in 2 delivery zones, with 100% accuracy across **36,000+ transaction records** over 18 months
- Kept daily distribution and delivery documentation running at ~396 units/day against a 100-unit baseline fleet capacity
- Resolved supply and billing discrepancies with the principal (Pertamina) within agreed timeframes
- Compiled monthly cost, billing and fulfilment reports for management, then ran a self-initiated analytics study on the same data that exposed margin leakage the monthly reports had missed (see Projects)

CRM and Marketing Communication Intern (MSIB Batch 6)

Feb 2024 - Jun 2024

Educourse.id (Maleo Edukasi Teknologi), South Tangerang

- Onboarded 20+ partner institutions and ran 3 offline trial programs, converting outreach into 171+ enrolled participants at a 93% interest rate
- Assigned by the Head of Finance to reconcile 500+ accounts payable and 500+ accounts receivable entries monthly across 5+ branch offices, with zero discrepancy escalations
- Streamlined daily reporting and participant tracking (200 to 300+ records a month) with spreadsheet functions, cutting reporting time by 30% and improving tracking accuracy by 25%

Business Administration and Client Support Intern

May 2024 - Nov 2024

Eco Karya Teknologi (renewable energy solutions), Yogyakarta

- Validated 100 to 150+ operational records daily under zero-tolerance accuracy standards, correcting inconsistencies before management escalation
- Produced 10 to 12 weekly and monthly Excel reports consolidating data from 3 to 4 departments, with 95% on-time delivery
- Mapped the document archiving process, redesigned the filing structure and rolled it out to the team, cutting file retrieval time by 30%

Marketing Communication Intern

Sep 2023 - Dec 2023

Soko Finansial (capital market education startup), Yogyakarta

- Coordinated logistics, documentation and stakeholder communication for 50 to 100+ participants per session over 4 months with zero administrative errors
- Tracked 5+ weekly KPIs and produced about 16 weekly reports with recommendations for management

- Maintained 200+ CRM and client records a month, improving data accuracy by 20%

PROJECTS

LPG Supply Chain Prescriptive Analytics

Jan 2026

Python, Prophet, scikit-learn, SHAP, Streamlit | self-initiated

- Analysed 36,000+ transactions of a business running at a 13.4% net margin and found three causes of margin leakage: fleet overload (demand ~4x capacity), one territory earning 70% of profit, and silent B2B churn
- Built a Random Forest + SHAP churn model flagging **85%+ of at-risk B2B customers** before they stop ordering; order frequency, not value, was the strongest signal
- Re-sequenced 25 delivery points by distance and proposed a capacity upgrade to 450 units/day with a 6-month payback; findings deployed as a Streamlit dashboard

Sales Order Anomaly Detection

Jun 2026

SQL (MySQL 5.7) | DQLab hackathon | score 100/100, rank 62 of 194

- Wrote a single query that walks a 5-level node hierarchy to find each order's top-level branch, with no temporary tables
- Flagged orders beyond 3 standard deviations of their own branch average: **20 of 509 orders (3.9%)**, each with its distance from the average and z-score
- Returned a summary per branch and the flagged detail in one result, narrowing manual review from 509 records to 20 (96% less)

Retail Rising Stars and Product Bundles

May 2026

Python, pandas, mlxtend | DQLab x UjiKompetensi hackathon

- Analysed **42,446 retail transactions** to find which products are growing and which ones customers buy together
- Identified 13 rising-star SKUs from sustained growth in their moving-average daily sales (12+ consecutive rising days)
- Generated 20 bundle recommendations with Apriori association rules (support 1% or more, lift 2 or more) tied to the rising stars, exported with charts for the business

Inventory Replenishment Audit

Sep 2026

Excel | DQLab x UjiKompetensi hackathon | score 100/100

- Built a 12-month min/max replenishment plan for a 5-SKU distributor in live Excel formulas: demand projection over 168 order lines, min/max levels, 64 reorder events against a 3-day supplier lead time
- Audited the plan's own output: **87.6% unit fill rate**, warehouse above capacity on **109 days** (peak 122.8%), and 5 purchase orders placed while the previous order was still in transit
- Recommended triggering on inventory position (on hand plus on order), a reorder point built on lead-time demand plus safety stock, and smaller, more frequent orders before adding warehouse space

EDUCATION

Bachelor of Management, Marketing concentration

Aug 2020 - Aug 2024

Universitas Andalas, Padang

- GPA **3.79 / 4.00, Best Graduate of Class**
- Field research with 150+ MSME respondents; led a 5-person market-entry feasibility study covering supply chain and competitive landscape

CERTIFICATIONS AND AWARDS

- **DQLab x UjiKompetensi hackathons**: Excel Inventory Replenishment, score **100/100** (Sep 2026); SQL Sales Performance Root Cause Analysis, score **100/100, rank 62 of 194** (Jun 2026); Python Retail Crisis and Recovery (May 2026)
- **Google Data Analytics**, Coursera (Sep 2026): 6 courses from Ask Questions to the Capstone Case Study, plus Introduction to Data Analysis Using Python
- **Supply Chain Management and Analytics**, Unilever, Coursera (2026); **Foundations of Business Intelligence**, Google, Coursera (2026); **Business Analysis Fundamentals**, Microsoft, Coursera (2026)
- **DQLab Mini Bootcamp 12** (Xeratic/UMN, Jul 2026): Data Analyst with SQL and Python; Data Analyst with Excel; Machine Learning and AI for Beginner
- Google Analytics, score 92/100; HubSpot CRM, score 89/100
